Smart Channel The Most Eye-Catching Premium Placement in LINE Chat List!

Have you LINE'd today? The 'Smart Channel' at the top of the chat page features personalized message broadcasts and a carousel of various content and ads. It is the highest-reaching ad placement in LINE. Your ads also have the opportunity to gain Impression through LAP's high-visibility placements!

LINE Smart Channel Ad Format

◆ **High Awareness: Over 60% of users who notice the pinned**

◆ **65% of users understand this space as a personalized**

◆ **Three Key Drivers of Clicks！①Content that is relevant or of interest to me**

②Headlines that capture my attention③Offers or promotional information
以上皆為示意圖，LINE保留最終樣式調整權利。

LINE TODAY reaches up to 18 million monthly active users, equivalent to a 95% reach among LINE users

LINE TODAY partners with over 600 content providers, delivering more than 3,000 new articles daily, with ads naturally integrated into a premium content environment.

LINE TODAY Channel Ad Format
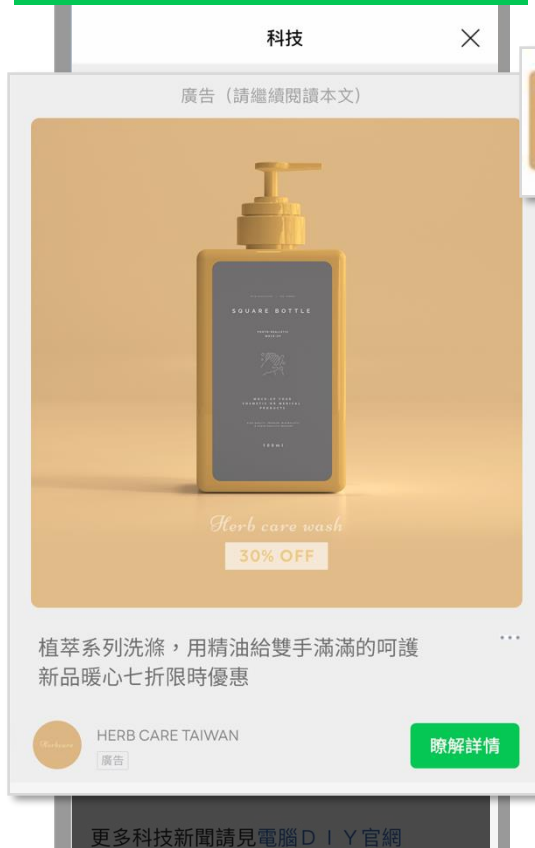

LINE TODAY Official Account

◆ Extremely high awareness, high, usage! and strong stickiness!

Among LINE users, nearly 82% are aware of LINE TODAY, and 66% actively use it. Nearly 50% of users access it daily, and among daily users, more than half open LINE TODAY 2–4 times per day.

◆ 75% of respondents agree: "LINE TODAY is my first stop for daily news."

◆ 68% of respondents agree: "I pay attention to advertisements on LINE TODAY."

◆ Over 60% of respondents agree: "Seeing information on LINE TODAY triggers my shopping ideas."

◆ LINE TODAY offers diverse official accounts with continuous updates to ensure no information is missed

LINE Hotspot/LINE TODAY/LINE TODAY Sports/LINE TODAY Entertainment/ LINE TODAY Finance /LINE TODAY Movies/ LINE TODAY Horoscope.

◆ Exclusive audience characteristics: sports enthusiasts and food & travel video lovers.

Over 80% of users who want to watch international or local sporting events think of LINE TODAY first for live streaming; among LINE TODAY users, the proportion watching food and travel videos has risen to nearly 40%.

LINE VOOM has over 16 million monthly active users

It offers a vibrant community ecosystem where users can interact and engage with friends or KOLs, while also discovering interesting video content through recommendations.

Flexible Ad Delivery Modes: **Automatic Placement & Manual Placement**

LINE provides two ad delivery modes: Automatic Placement and Manual Placement.

When selecting Automatic Placement, the system delivers ads across all available placements to achieve optimal performance. With broader reach, this mode allows advertisers to maximize their budget while distributing ads simultaneously across different placements to better control overall advertising costs.

If you wish to focus on specific placements, using customized creatives tailored to different ad strategies and formats, you can choose Manual Placement. This mode is also suitable when brand safety is a concern, as it enables advertisers to manually select placements that align more closely with their brand image.

Advanced Ad Optimization

For advertisers aiming to segment audiences by placement and test ad optimization and delivery strategies,

we have observed that advertisers using the Manual Placement feature achieved significantly stronger performance on average, a **20% increase** in click-through rates.
Brand Safety Considerations

If your brand has specific Brand Safety policies, we recommend using this feature to manually select placements that align with those policies.

LINE continuously implements strict and ongoing content optimization. However, if there are concerns about ads appearing alongside certain news topics, we suggest the following options:

① LAP: Use this function to exclude TODAY traffic.

② TODAY Guaranteed Ads: Target specific categories or filter out sensitive topics.

Source: LAP system data, August–November 2023.

Flexible Ad Delivery Modes: Placement & Manual Placement

No.	Q & A
1	Q. Does the LAP Target Placement feature support all campaign objectives, including CPF (Cost Per Friend) Friend Add ads and DPA (Dynamic Product Ads) Product Summary Sales ads? A. Yes, this feature supports all ad objectives.
2	Q. Will the use of the placement selection feature affect system learning? How many events do I need to complete the system learning? A. It will not affect and will be the same as the existing system learning specifications. A general campaign with at least 40 target events in the last 30 days; (For app activity tracking) in the case of SKAN events, at least 150 events in a 30-day period.
3	Q. Even if you do not use the 'Target Placement' feature for ad delivery, can the performance report still be displayed according to the delivery target? A. Yes, regardless of whether you use 'Auto Placement' or 'Target Placement,' you can download the performance report according to the 'Delivery Target.
4	Q. Why are some placements grayed out and unavailable for selection for certain ad accounts? A. Available placements for each ad account must comply with LAP's ad account and industry regulations. Some ad accounts may experience certain placements being unavailable for selection due to industry-specific restrictions.
5	Q. Why can some ad accounts see the ad format options supported by certain placements (at the ad level) even though those placements are unavailable or not selectable for delivery? A. Yes, the list of ad format options at this level is based on the overall specifications supported by the placements and is not adjusted based on the delivery options available for individual accounts.
6	Q. Why does the estimated audience data (at the ad group level) not change when adjusting the selected placements? A. The estimated audience is provided based on different 'audience' targeting conditions. Since placement selection is not a part of the audience conditions, changes in placements do not affect the estimated audience data.

LAP Provides Diverse Targeting Options

Advertisers can specify age, gender, mobile operating system, region, interests, and user behaviors to deliver ads to the right audience.

The system can predict user attributes and interests to target ads toward users more likely to click or convert, thereby improving ad performance.

Age

Age targeting ranges from under 14 to 65+, with segmented delivery options:

Under 14, 15–19, 20–24, 25–29, 30–34, 35–39, 40–44, 45–49, 50–54, 55–59, 60–64, 65+

Gender / Mobile OS

Ads can be delivered by specifying gender or mobile operating system version.

Region

Ads can be targeted by city/county, or by selecting a point on a map and setting a radius in kilometers. Advertisers can also specify regional interaction modes:
People living in the area, People working in the area, People recently visiting the area
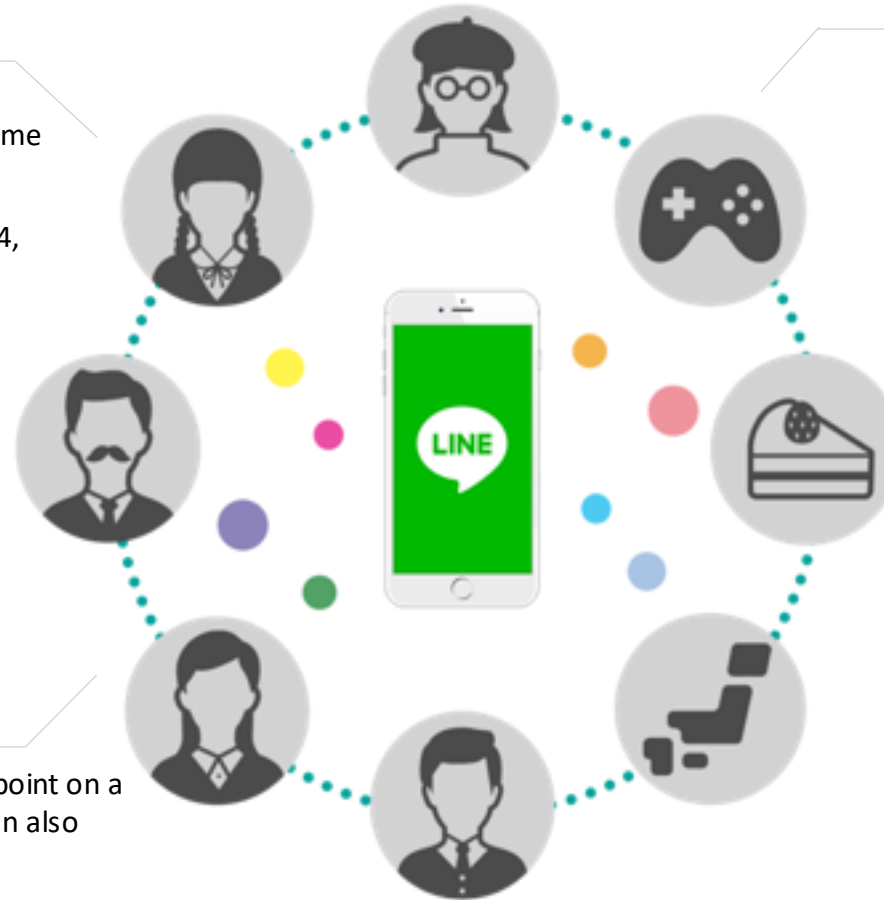

Detailed Targeting

Ads can be delivered by specifying interests, user status, or purchase intent behavior categories.

【Interests】
Games / Electronics & Home Appliances / Sports / Career & Business / Fashion / Home & Gardening / TV & Movies / Music / Education & Certification / Finance / Health & Fitness / Automobiles / Books & Comics / Food & Dining / Beauty & Cosmetics / Travel / Entertainment / Shopping

【Behaviors】
Various types of game players / LINE service users / Financial behavior preferences / Types of followed official accounts / Preferred news categories / Common leisure activities / Commuting methods / Lifestyle status / Precise location-based interactions / Topics of interest / Sticker enthusiasts / Users currently considering purchases NEW

【Personal Status】
Commuting mode / Lifestyle status

【Purchase Intent】
Recent consumers / Purchasing power / Preferred payment tools / Online shopping behaviors for different products / Preferred shopping channels / Predicted consumer audiences NEW

*These audience data within the LINE family of services are categorized as "proxy attributes" based on users' registered gender, age group, and region, as well as their activity records (e.g., sticker purchase history, LINE Official Account friend registration, etc.).
*The above categories are subject to periodic updates; please refer to the actual system interface for the latest options. For interest and behavioral targeting options, please see the appendix: "Audience Overview."

Advertiser First-Party Audience

Advertisers can use their own customer data to deliver ads to target users. For example, by uploading device identifiers of users who made their first purchase (IDFA/AAID), advertisers can deliver ads encouraging repeat purchases. Conversely, the same data can also be used to exclude purchasers from ad targeting. In addition to device IDs, audiences can also be built from website traffic, video viewers, image clickers, mobile app users, LINE Official Account friends, uploaded phone numbers or email addresses. Advertisers can also expand reach by creating lookalike audiences based on existing customer lists.

Example) **First-purchase customer data**	**Identify users who made their first purchase**	**Ad display**

Community Ads – PC only supports the image format, and therefore can only share image click audiences.

24

Advertiser Exclusive Audience – LINE Official Account Friends

Advertisers can create audiences from LINE Official Account friends and deliver ads to these audiences. When creating audiences, two types can be established: "Active friends of this account" and "Blocked friends of this account."
Additionally, lookalike audiences can be created based on these audiences to reach potential users who have not yet been engaged.

LINE Official Account Friends

Create active friend/block friend audiences on the LAP

Deliver ads to the target audience

Active Friends   Valid Friends
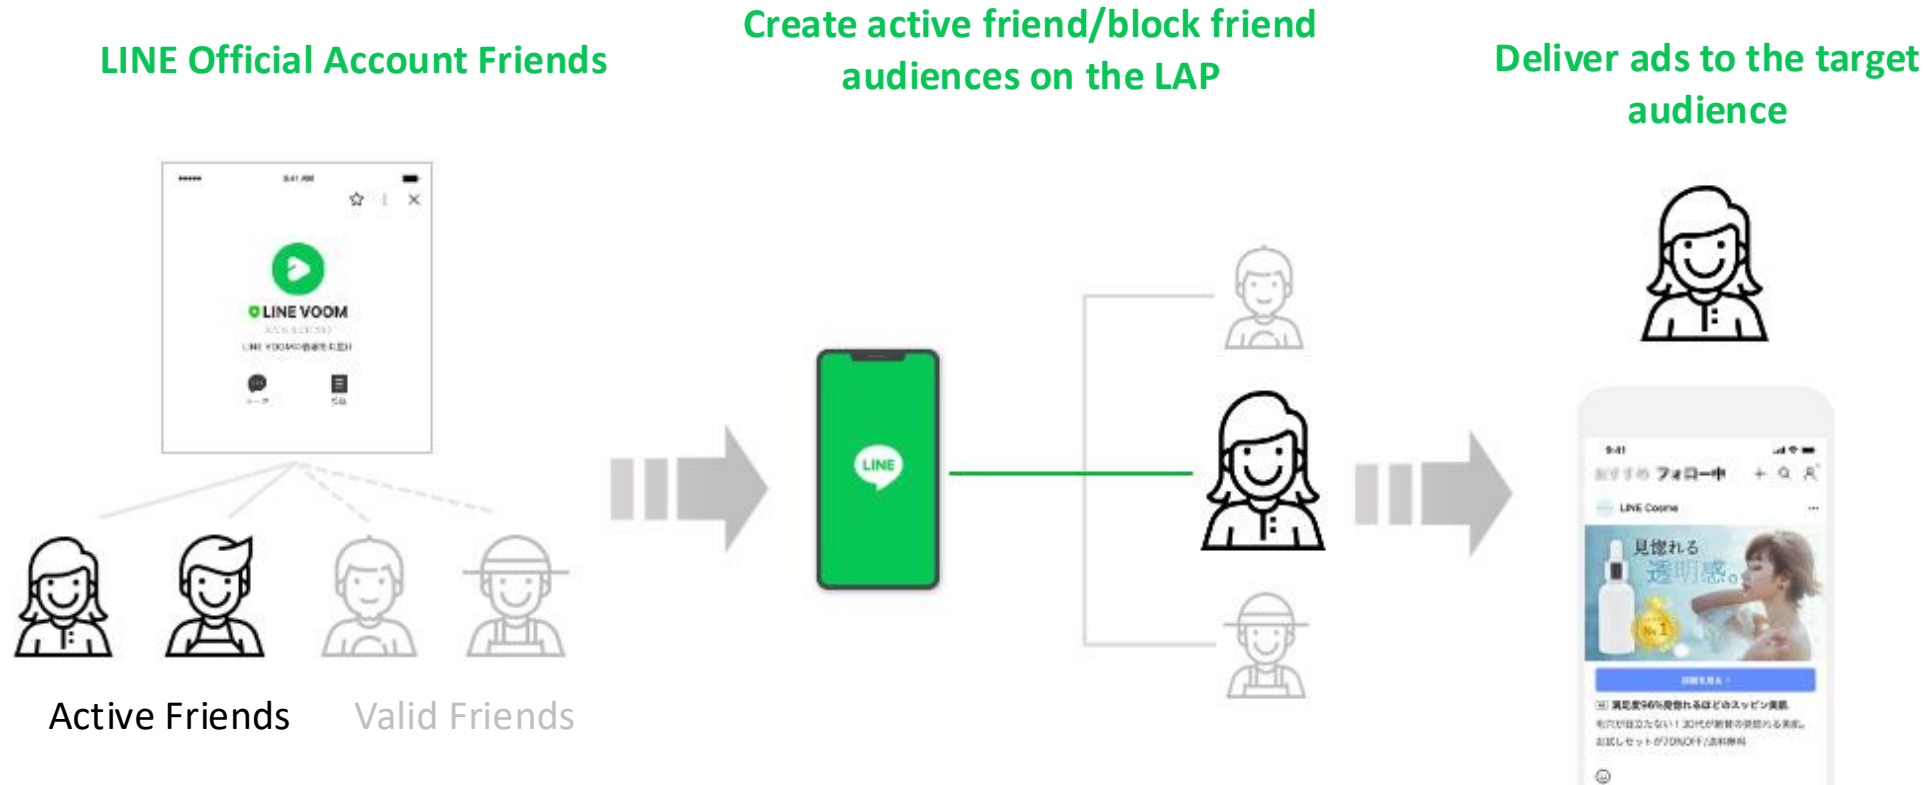

The lists of active and blocked friends can only be created for Official Accounts linked to the advertiser account.
When creating audiences, "Active friends" and "Blocked friends" must be created separately.
If the LINE ID of the account changes after creating the audience, the audience must be rebuilt (and if the ad is already running, the campaign settings must also be updated).
Users who have deleted the account or have not logged into LINE for an extended period will be excluded, so the audience size may not match the total friend count of the account.

Lookalike Ad Audience

Lookalike Audience Functionality. The lookalike audience feature delivers ads to LINE users who are similar to the source audience (see table below).

The expansion range of lookalike audiences can be set from 1–15%, or set to "Automatic," allowing the system to optimize the ideal audience size based on the source audience.

Higher similarity results in higher accuracy of actions but a smaller audience size, limiting reach. Conversely, lower similarity decreases action accuracy but increases audience size and total delivery.
【Source Audience Types for Lookalike Audiences Reference Table 】

Delivery Audiences	・Website Traffic Audience ・LINE Official Account Friends Audience ・Uploaded IDFA/AAID ・Mobile App Audience ・LINE Business Manager Shared Audience ・Video View Audience / Image Click Audience ・Uploaded Phone Numbers / Uploaded Email Addresses

After creating a lookalike audience, it may take up to 24 hours before it can be used.
Lookalike audiences exclude users from the source audience.
A maximum of 10 lookalike audiences can be created (if the limit is exceeded, please delete or create new audiences).
If the audience size is below 100, the system cannot generate a lookalike audience due to insufficient learning data (please increase the size of the source audience).

Gain Friends (CPF) – One of the Unique Campaign Objectives of LAP Ads

Charged by cost per Friend！

Add-Friend Ads (Cost per Friend) is a unique ad format that allows advertisers to gain LINE Official Account friends through the LINE Ads Platform.

Friends who actively click the ad to add the account are high-quality users genuinely interested in the brand.
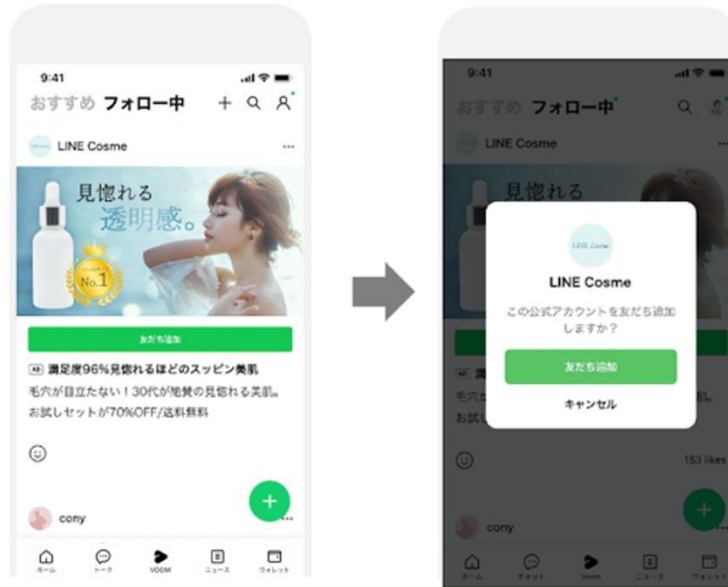

Item	Details
Ad Audience	Similar to regular LINE Ads Platform ads, advertisers can freely set
Delivery Cost	Manual Bidding: Cost per Friend starting from NTD $11 / Cost per 1,000 Impressions starting from NTD $40 / Automatic Bidding: Cost per Friend starting from NTD $16 / ※ Fees are charged when users click the "Add Friend" button.
Available LINE Official Account Formats	Eligible LINE Official Accounts: Only certified accounts.

Dynamic Ads (Product Feed Sales - DPA) – One of the unique campaign objectives on LAP

Based on users' browsing history on your official website, dynamic product ads deliver personalized recommendations tailored to each individual. Different landing links can be set for different products, effectively driving page revisit rates and boosting product conversion performance.
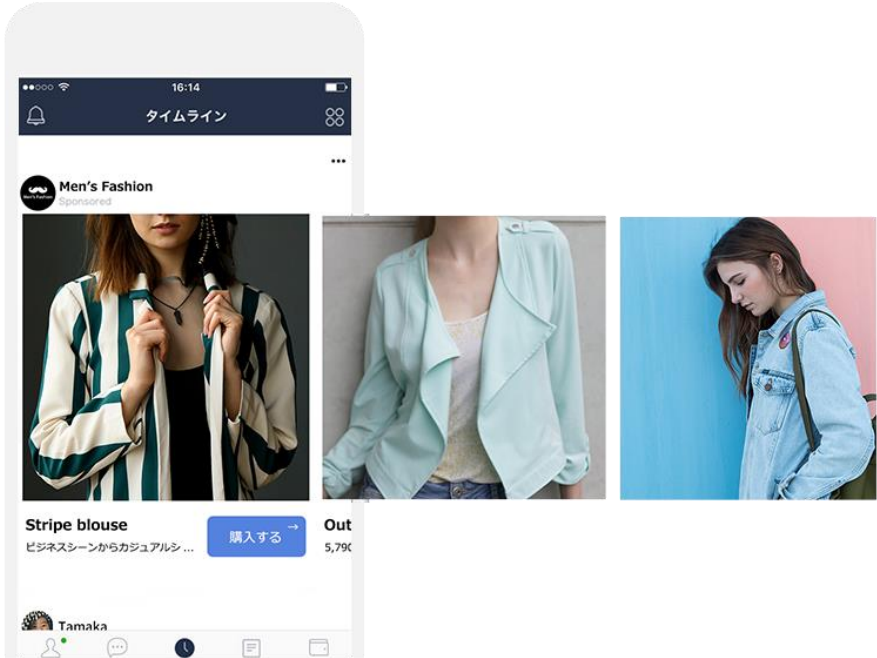

Item	Details
Target Audience	Same as other LINE Ads Platform campaigns, advertisers can freely set bids
Delivery Price	Manual CPC starting from NT$4; Auto CPC starting from NT$8; Auto CPA starting from NT$100.
Ad Creative	Advertisers upload their product catalog (also called Data Feed / Product Feed) via FTP or through the LAP dashboard. For detailed instructions, please refer to the LINE Dynamic Ads Media Guide.

App Engagement – One of the unique campaign objectives on LAP

Deliver ads to users who have installed the app but have not used it for a long time, encouraging them to relaunch the app.

Ads can also be targeted based on users' in-app behaviors, allowing more precise ad delivery.

Users open the app and take specific in-app actions

Users who have not used the app for an extended period

Ads delivered to dormant users to drive re-engagement

Users relaunch the app after inactivity

Dormant Users
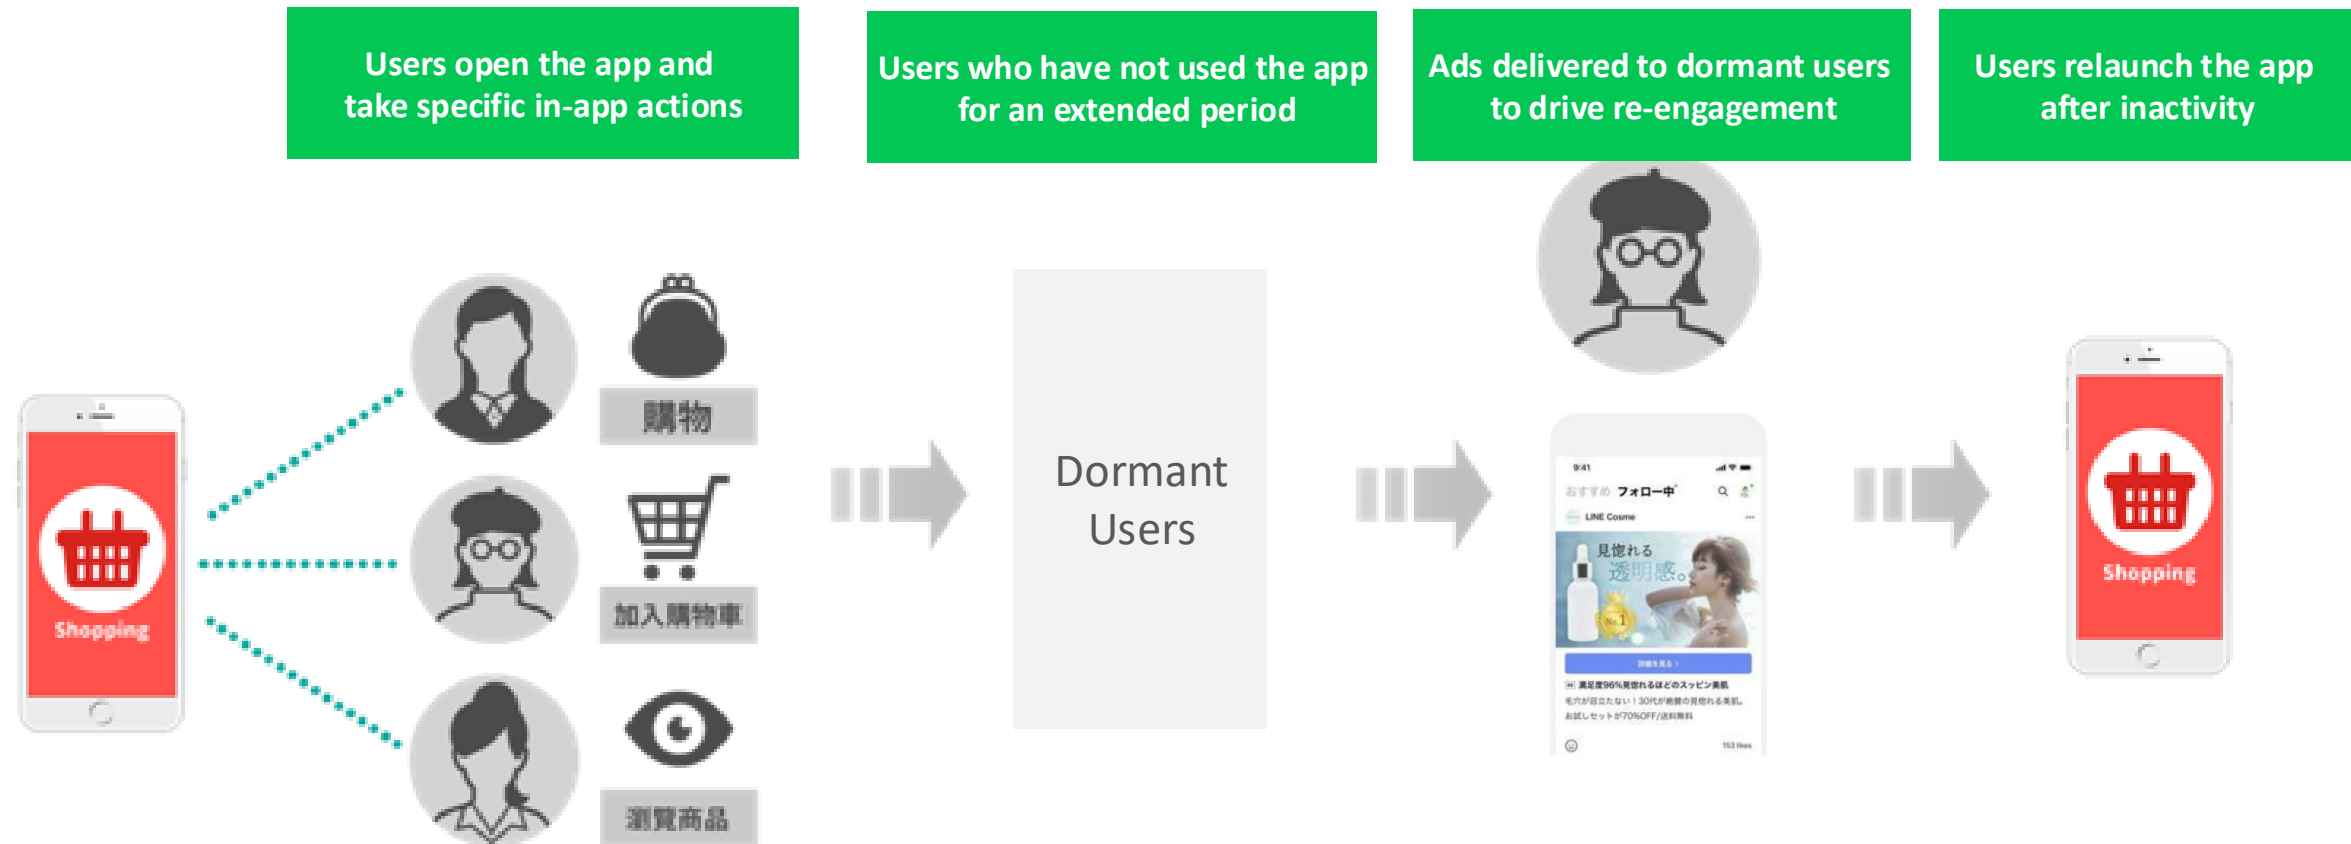

LAP supports multiple manual and automated bidding models.

Among them, automated bidding allows advertisers to optimize toward their set campaign objectives with minimal manual effort. Through machine learning, bids are automatically adjusted during delivery based on performance results, driving campaigns closer to the defined goals while maintaining efficient ad delivery. This approach significantly improves overall ad effectiveness.

Set a target CPA (Conversion Optimization)   **Machine learning continuously adjusts bids in real time**   **Ensures conversions are acquired within the defined CPA goal**

CPM NTD 64

CPM NTD 80

CPM NTD 120
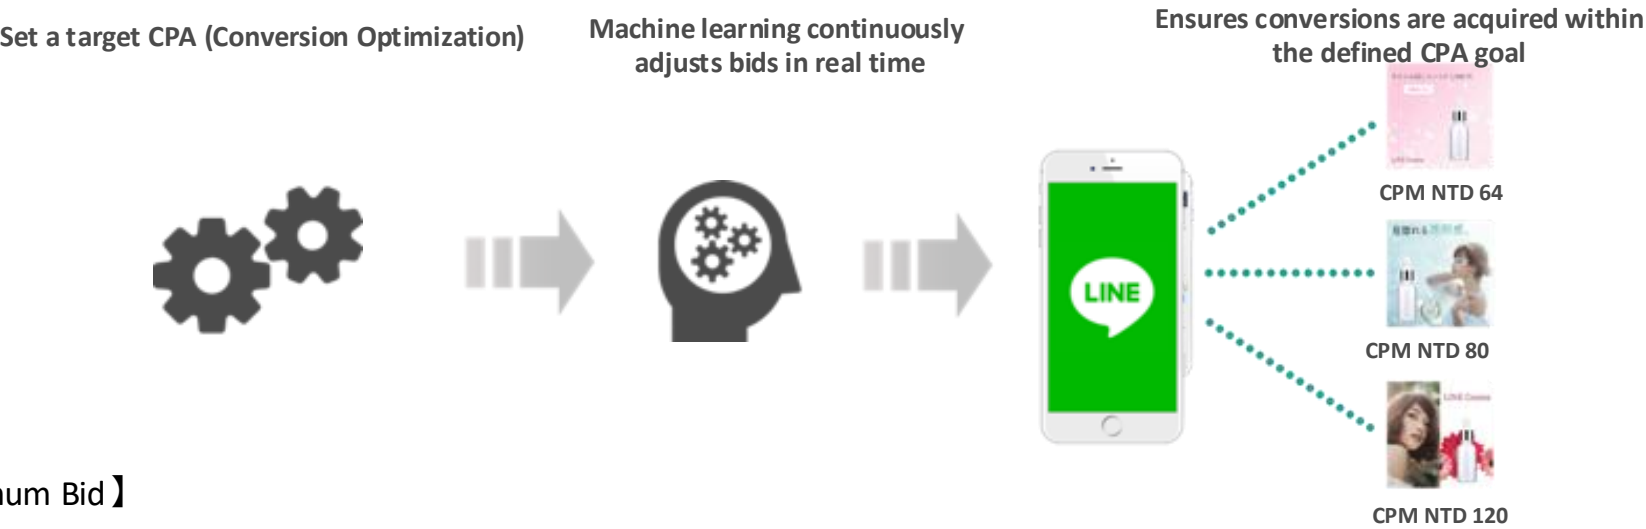

【 Bidding Overview & Minimum Bid 】
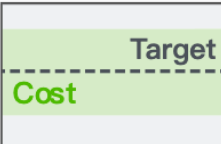

Campaign Objectives	Website Visits	Website Conversions	App Installations	Active App Engagement	Add Friends	Dynamic Ads	Video Views	Reach
Manual Bidding	CPC$4/CPM$40				CPF$11/CPM$40	CPC$4	CPM$40	CPM$40
Automated Bidding (Maximize Clicks)	CPC$8	CPC$8	CPC$8	✕	✕	CPC$8	✕	✕
Automated Bidding (Goal Optimization)	✕	CPA$100	CPI$50	CPE$25 (Event Optimization)	CPF$16	CPA$100	CPV$0.15 (3-second / Complete View Optimization)	CPM$40

When the campaign objective is Website Conversions, advertisers can use "Maximize Conversion Value" automated bidding. However, this requires either no bid cap or Target ROAS as the bidding strategy.

* All amounts are in NTD, exclusive of tax.
* Please note that the bid unit for automated bidding is not the final billing unit—it is only used for optimization purposes. Currently, LAP supports billing only in CPC or CPM, and video creatives are billed CPM only.

LAP supports multiple controllable automated bidding strategies.

When using automated bidding, advertisers can choose different strategies based on their desired level of control over budget pa cing and conversion costs.

Bidding Strategies	Cost Cap Set a maximum cost per event	Target Event Cost Set a target cost per event	Lowest Cost No limit, expend daily budget as aggressively as possible	Target ROAS
Recommended Usage / Timing	If you want to fully spend your daily budget while achieving your target events, it is recommended to set a maximum cost per event. In addition, If the maximum event cost is set too low, the budget may not be fully spent.	To maximize the number of events obtained within a set target cost per event while consuming the daily budget, this setting is recommended. The actual cost per event may vary approximately ±10% of the target (not guaranteed).	Spend daily budget as quickly as possible	1. Campaign Goal: Website Conversions 2. Automated Bidding: "Maximize Conversion Value" 3. Requirements: At least 40 conversions accumulated and past 30-day average ROAS data available in LAP
Bid Amount	Lowest	ighest	Highest (depending on market bidding conditions)	Set a reasonable target based on the past 30-day average ROAS in LAP
Daily Budget Pacing	3 Second Closest to the Set Daily Budget	2 Second Closest to Daily Budget	1 Closest to Daily Budget	-
Lower Conversion Cost / Level of Control	1 Strictest	2 Stability-Oriented (Not necessarily lower is better)	3 No Setting	-

*The bidding strategy option "Set Bid Cap" will be removed in January 2024.

Campaign Budget Optimization (CBO)

Smart budget management automatically allocates the budget to the best-performing combinations.

| Ad Account | Ad Campaign | •Ad Set / Ad Group |

＊ Existing ad groups cannot adjust bid amounts or bidding strategies.

Bidding Strategies

No limit, expend daily budget as aggressively as possible

* New ad groups **cannot adjust** bid amounts or bidding strategies.

Cost Cap – Set a maximum cost per event

New ad groups **can adjust** bid amounts and bidding methods.

Target Event Cost – Set a target cost per event

Campaign budget optimization ❓
- ◉ Optimize
- ○ Don't optimize

Bidding amount configuration ❓

Configure automatically to maximize conversions ▾
Configure automatically to maximize conversions
Configure automatically to maximize conversion value

- When Campaign Budget Optimization (CBO) is enabled, the system will allocate the campaign's daily budget set below across the ad groups appropriately.
- Ad groups with better performance will receive a larger share of the budget. Therefore, it is recommended to set 2–5 ad groups to achieve optimal budget allocation and fully spend the daily budget.
- If the advertiser has an overall budget limit, it is recommended to set a total campaign budget cap.

03

Performance Tracking

LINE Tag

LINE Tag helps advertisers track website performance after ad clicks. It can also collect visitor data, which can be packaged into "Website Traffic Audiences" for further use.

LINE Tag

Components	Measurement Notes	Key Points
Basic Code	Each ad account must implement its own Basic Code.	Place the Basic Code within the <head>~</head> section of every webpage to be tracked.
Conversion Code	Place the Conversion Code on pages where you want to measure conversions. Each ad account has a unique Conversion Code.	Must be implemented together with the Basic Code. ※When coding, ensure the Basic Code is loaded before the Conversion Code.
Standard Event – Code	Standard Events are predefined event names by LINE. Each ad account has a unique Standard Event Code.	Must be implemented together with the Basic Code. ※When coding, ensure the Basic Code is loaded before the Standard Event Code.
Custom Event – Code	Advertisers can define Custom Event Codes based on their needs. Each ad account has a unique Custom Event Code.	Must be implemented together with the Basic Code. ※When coding, ensure the Basic Code is loaded before the Custom Event Code.

【LINE Tag Features】

Functions	Usage
On-site Conversion Tracking	• Conversion: Refers to the most important visitor actions for the advertiser, such as purchases or lead submissions. Conversion codes have a fixed 30-day attribution period. In LAP, "Conversions +1" means a user clicked the LAP ad and triggered the conversion code once within 30 days. • Standard Conversion: Uses LINE predefined events to measure user conversion behaviors, such as viewing product details, adding to cart, or making a purchase. Attribution period: 30 days. • Custom Conversion: Allows measurement of multiple types of conversion behaviors. Advertisers can define a custom conversion based on pages containing LINE Tag codes that meet custom event or URL conditions. Attribution period can be set from 1–90 days.
Build Website Traffic Audiences	To remarket to specific audiences, use the "Website Traffic Audience" function. Data retention (lookback period) can be set from 1–180 days. Visitors can be defined as audiences based on pages containing LINE Tag codes that meet event or URL conditions.

•It is recommended to enable first-party cookie / local storage in the "Tracking (LINE Tag)" settings to improve tracking accuracy and avoid being affected by browser policy updates.

•Other code can be inserted between the Basic Code and Conversion Code (or Custom Event Code), but the loading order must be: Basic Code → Conversion Code / Custom Event Code.

•All LINE Tag implementations must use the same Tag ID; do not mix different sources (e.g., using another OA's Basic Code + LAP account Conversion Code is incorrect).

34

Shared LINE Tag

In addition, LAP provides a Shared LINE Tag feature across LAP, LINE Official Accounts, and the Business Manager platform. This eliminates the need to install multiple LINE Tags across different systems or multiple LAP ad accounts. The same LINE Tag (Tag ID must be identical) can be used across products and LAP accounts for on-site performance tracking and building Website Traffic Audiences.

Definitions		Key Points
Original Account LINE Tag	Each Official Account CMS, Business Manager Platform, or LAP backend has its own LINE Tag code.	Refer to the previous page for details.
Shared LINE Tag	Instead of installing a new tag, the existing LINE Tag from the same Official Account / Business Manager ID / dedicated ID or other LAP ad accounts is reused for tracking and audience creation. This tag is considered a Shared LINE Tag.	• On-site Conversion Tracking：：If the source LINE Tag is installed and sharing is enabled, you must define conversions via Custom Conversions in LAP to record conversions. • Website Traffic Audience：When using a Shared LINE Tag, only the LINE Tag tracking function is shared, not platform data. Performance data is not shared across Official Accounts or ad account

【Example Scenarios for Using Shared LINE Tag】

	1 LAP LINE Tag shared with an Official Account	2 Use a Shared LINE Tag from another LAP account	3 Use a Shared LINE Tag from an Official Account
Suitable Clients	Advertisers with an Official Account that already has a LAP account	LAP advertisers with multiple accounts	LAP advertisers whose webpages already have an Official Account LINE Tag installed
Requirements	Bound to the same Official Account Basic ID / Dedicated ID and sharing enabled*		

• If the source disables the Shared LINE Tag function, the LINE Tag tracking will stop. Please ensure the source remains available for long-term use to avoid data interruption.
• To use a Shared LINE Tag for collecting events as input for automated optimization, Custom Conversion Events must be used. For automated optimization using Conversions or Standard Events, the LAP account's own LINE Tag must be used.

LINE Tag – Website Traffic Audience Data Collection

From the moment the LINE Tag is implemented on a webpage, the page will start accumulating audience data.

Example 1:
If the LINE Tag is set up on January 1, audiences created on January 3 can still include user data accumulated from January 1.

Audience Data Accumulation (Starting January 1)

Start accumulating user data

| January 1 | January 2 | January 3 | January 4 | January 5 |

Date LINE Tag implemented on webpage   Date audience created in LAP interface
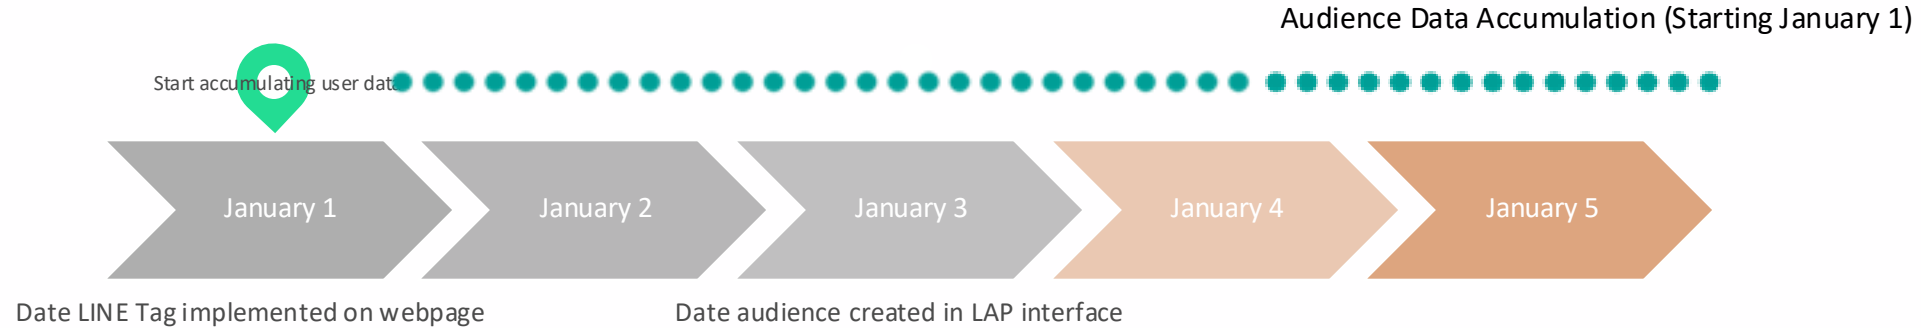

Audience targeting can be based on users collected within the Data Retention Period, which is calculated backward from the ad delivery date.

Example 2:
If the LINE Tag is set up on January 1, and an audience with a 3-day Data Retention Period is created on January 2, and an ad group is set on January 5 to target this 3-day retention audience, ads can be delivered to users who visited LINE Tag–enabled webpages from January 3 to January 5 (current date).

Deliver ads to audiences collected from January 3 to January 5

Collected ad delivery audiences

| January 1 | January 2 | January 3 | January 4 | January 5 |

Date LINE Tag was imple
mented

Date the 3-day Data Retention au
dience was created

Date the ad group was created: targeting the 3-day
Data Retention audience
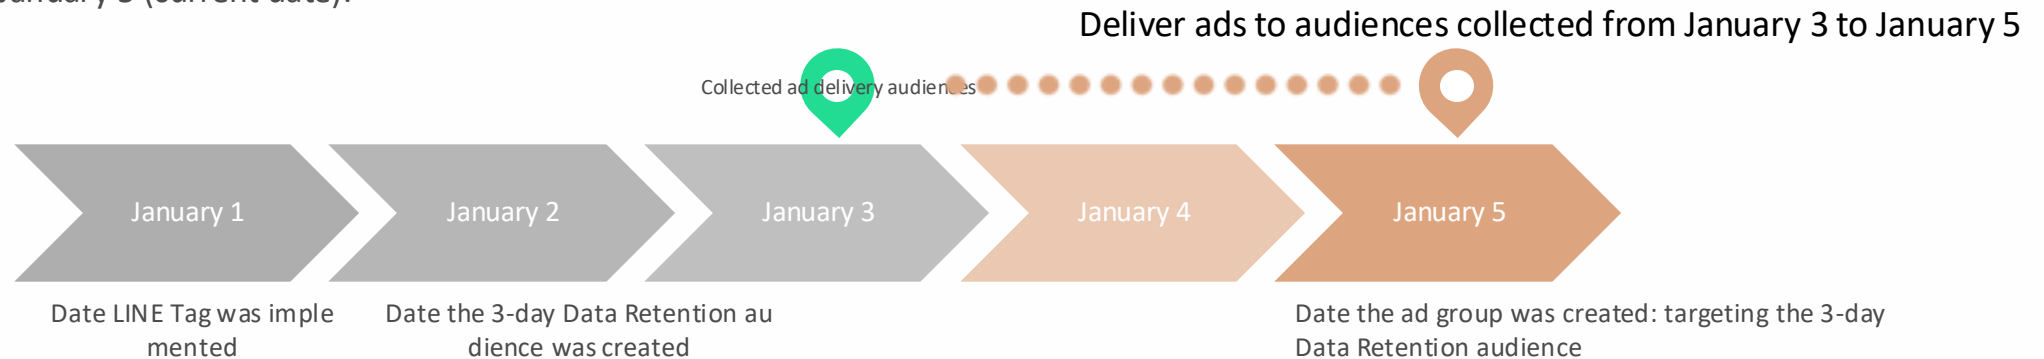

*Data collection requires some time. Once the audience size exceeds 100, it can be used as a target for ad delivery.

36

App Conversion Measurement

LAP's app conversion performance measurement is achieved through collaboration with the following three third-party SDK measurement partners, enabling conversion tracking and app audience collection. As the measurement URLs and SDK configurations vary by partner, please confirm specifications and usage methods with the third-party SDK measurement partner before implementation.

Adjust adjust株式会社	**AppsFlyer** Appsflyer,Inc.	**kochava** Kochava,Inc.

【List of Corresponding SDK Measurement URLs】

SDK Partner	Corresponding Measurement URL
Adjust	It is necessary to modify part of the measurement URL string. When the SDK issues the measurement URL, the URL will contain the string [% ADVERTISING_ID %]; please replace it with {ADVERTISING_ID} before submission.
AppsFlyer	Example： Before：https://app.adjust.com/xxxxxxxxx&idfa=[% ADVERTISING_ID %]&xxxxxxxxx After：https://app.adjust.com/xxxxxxxxx&idfa={ADVERTISING_ID}&xxxxxxxxx
kochava	No need to handle URL modification issues.

【List of Corresponding SDK IDs】
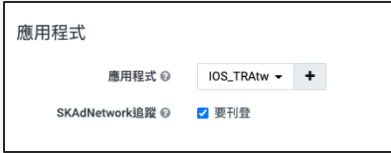

LAP Console Name	Adjust	AppsFlyer	Kochava
Ad Account ID	AdvertiserID	Account_ID	ADVERTISER ID
App ID※	AppID	Postback_ID	MOBILE APP ID

*The App ID here refers to the ID obtained in LAP after adding the app under "Media," and not the App Store App ID or package name.
*For configuration issues in the third-party SDK console, please contact the corresponding SDK service provider.

LAP Supports Apple iOS Attribution Framework – SKAdNetwork (SKAN)

- KAN tracking is a framework provided by Apple to support app advertising campaigns with the objective of "App Installations." By integrating SKAN, advertisers can track conversion performance for iOS users, enabling more precise performance measurement for iOS audiences.
- LAP supports SKAN data postbacks to SDK partners' dashboards, Adjust and Appsflyer. SKAN data from LAP can be viewed in both the LAP CMS and the dashboards of partnered MMPs.
- When using SKAN tracking, due to Apple's specification limitations, the number of ad groups that can be linked per app is subject to the following restrict

	Using SKAdNetwork for tracking, e.g., iOS apps	Not using SKAdNetwork for tracking, e.g., Android apps
Number of ad groups that can be linked per app	• Up to 50 ad groups can be used, shared across all country ad accounts. (Note: In Japan, the limit remains 25.) • Definition of one app: distinguished by whether the App Store URL ID is different. Example: the following are considered the same app. https://apps.apple.com/jp/app/line/id443904275 https://apps.apple.com/tw/app/line/id443904275	No restrictions
SKAdNetwork tracking feature	No application is required; simply check the box to publish under the ad group you wish to link.	No application required
Campaign and ad group settings	• At the campaign level, the advertising objective must be set to App Installations. • At the ad group level, the SKAdNetwork tracking feature must be enabled (this option only appears when selecting an iOS app). 應用程式 應用程式 ⊘ IOS_TRAtw ▾ + SKAdNetwork追蹤 ⊘ ☑ 要刊登	No configuration required
Types of detectable "installs"	• Installs reported back by SDK partners (same field as before, tracked via IDFA identifiers). • Installs reported back via SKAN tracking (the advertiser's app must support the SKAdNetwork function, and only installs recognized by SKAN — occurring when the user's LINE version is 12.12.0 or higher and iOS version is 14.0 or higher — will be counted).	Installs reported back by SDK partners
Automatic bidding	Available bid strategies: choose "Automatically maximize clicks" or "Automatically maximize SKAN event volume."	Available
Reports	• Installs reported back by SDK partners (same field as before) • Installs reported back via SKAN tracking (displayed at the campaign and ad group levels; cannot be further segmented by ad level, region, age, gender, etc.) • Metrics such as impressions and clicks follow the original specifications and can still be segmented for detailed analysis.	Same as original LAP specifications

- LINE SKAN data postbacks cannot be turned on or off. Once the SDK partner integration is completed, LAP data postbacks will start automatically.
- The time at which LINE SKAN data appears in the SDK partner dashboard may vary depending on each SDK partner's system update schedule. For any questions regarding data updates in the SDK partner dashboard, please contact your SDK service provider.
- Once 50 ad groups are bound, the 51st ad group cannot be linked. If one ad group is unlinked, a new ad group can only be bound after 14 days. We recommend that advertisers wait at least 150 days before binding a new ad group. Due to SKAN framework limitations, if ad groups are reassigned within 150 days, conversions from the unlinked old ad group may be incorrectly attributed to the newly bound ad group. Note: the limit in Japan remains 25 ad groups. For example, if 25 ad groups are bound in Japan, the remaining 25 ad groups can be allocated to other country accounts.
- Installs reported by SDK partners and installs reported via SKAN may overlap in counting.
- SKAN data postbacks may experience delays. According to SKAN specifications, to protect user privacy, there may be a delay of at least 72 hours up to 150 days (SKAN 4.0).

Performance Report Overview (1-1)

The data available for viewing and downloading in the performance report are as follows:

Item Name	Description
Ad account name	Ad Account Name
Ad account ID	Ad Account ID
Impressions	Impressions *1
Viewable impression	Viewable Impressions *2
CPM (cost per thousand impressions)	Cost per Thousand Impressions (CPM)
Clicks	Clicks
CTR (click-through rate)	Click-Through Rate (CTR)
CPC (cost per click)	Cost per Click (CPC)
CV (All)	Conversions (All) – Includes total conversions tracked via CTCV + EVCV
CVR (All)	Conversion Rate (All) – Total conversion rate tracked via CTCV + EVCV
CPA (All)	Cost per Conversion (All) – Total cost per conversion tracked via CTCV + EVCV
Cost	Ad Spend
Currency	Currency

Item Name	Description
CV (product details viewed)	Standard Event – View Product Details Includes total conversions tracked via CTCV + EVCV
CV (product details viewed - Click)	Standard Event – View Product Details Only CTCV conversions
CV (LINE Tag Click)	Conversions tracked via LINE Tag Only CTCV conversions
CV (CV API Click)	Conversions tracked via CV API Only CTCV conversions
CV (Click)	Conversions Only CTCV conversions
CVR (LINE Tag Click)	Conversion Rate (LINE Tag) CTCV conversion rate tracked via LINE Tag
CVR (Click)	Conversion Rate (Click) Conversion rate tracked via CTCV
CPA (LINE Tag Click)	Cost per Conversion (LINE Tag) CTCV cost per conversion tracked via LINE Tag
CPA (Click)	Cost per Conversion (Click) CTCV cost per conversion tracked via click
Reach (estimated)	Unique Reach (Estimated)
Frequency	Average Frequency per User
Reach start date	Reach Start Date
Reach end date	Reach End Date

*1 Impressions – An impression is counted when an image or video is displayed by at least 1 pixel.

*2 Viewable Impressions – A viewable impression is counted when an image or video is displayed by 100%.

*When the reporting unit is set to "Detailed Objective," a single user may have multiple detailed objective tags, which can result in repeated counting of corresponding impressions/clicks. Therefore, the number of impressions and clicks in the report may not match totals at other levels.

*When a specific reporting unit is selected, the report data is updated once per day. To check data for the current day, please review the report after 8:00 AM the following day.

※ Existing conversion metrics will be updated to include both Click-to-Conversion (CTCV) and Engaged View-to-Conversion (EVCV) in the "○○ (All)" metric.

Performance Report Overview (1-2)

The data available for viewing and downloading in the performance report are listed in the table below.

Item Name	Description
Video starts	Video Starts Play
Video (viewed for at least three seconds)	3-Second Video Plays
Cost per 3-second playback	Average Cost per 3-Second Video Play
Video (25%/50%/75%/95%/100% watched)	Video Plays at 25% / 50% / 75% / 95% / 100%
Cost per complete video view	Average Cost per Complete Video Play

*1 Impressions – An impression is counted when an image or video is displayed by at least 1 pixel.

*2 Viewable Impressions – A viewable impression is counted when an image or video is displayed by 100%.

*When the reporting unit is set to "Detailed Objective," a single user may have multiple detailed objective tags, which can result in repeated counting of corresponding impressions/clicks. Therefore, the number of impressions and clicks in the report may not match totals at other levels.

*When a specific reporting unit is selected, the report data is updated once per day. To check data for the current day, please review the report after 8:00 AM the following day.

Performance Report Overview (2-1) – App Tracking Related Data

The data available for viewing and downloading in the performance report are listed in the table below.

Item Name	Description
Installs	App Installs – Includes installs tracked via CTCV + VTCV + EVCV
Install rate	App Install Rate – Total install rate tracked via CTCV + VTCV + EVCV
Cost per install	Cost per App Install – Cost per install tracked via CTCV + VTCV + EVCV
Installs (SKAN)	App Installs (SKAN Click + SKAN View) – Includes installs tracked via CTCV + VTCV
Cost per install (SKAN)	Cost per App Install (SKAN Click + SKAN View) – Cost per install tracked via CTCV + VTCV
Installs (clicks)	App Installs (Click) – Only counts CTCV installs
Install rate (clicks)	App Install Rate (Click) – Only counts CTCV install rate
Cost per install (clicks)	Cost per App Install (Click) – Only counts CTCV cost per install
Installs (views)	App Installs (View) – Only counts VTCV installs
Installs (clicks and views)	App Installs (Click + View) – Includes total installs tracked via CTCV + VTCV
Cost per install (clicks and views)	Cost per App Install (Click + View) – Includes total cost per install tracked via CTCV + VTCV

Item Name	Description
Installs (SKAN clicks)	App Installs (SKAN Click) – Only counts CTCV installs
Install rate (SKAN clicks)	App Install Rate (SKAN Click) – Only counts CTCV install rate
Cost per install (SKAN clicks)	Cost per App Install (SKAN Click) – Only counts CTCV cost per install
Installs (SKAN views)	App Installs (SKAN View) – Only counts VTCV installs
Open	App Opens – Includes CTCV + EVCV
Open rate	App Open Rate – Includes CTCV + EVCV
Cost per open	Cost per App Open – Includes CTCV + EVCV
View home screen	App Home Page Views
Cost per view (category)	Cost per Category View (App)
Category view	Category Views (App)
Category view rate	Category View Rate (App)
Cost per view (category)	Cost per Category View (App)

* All of the above data require coordination with LAP's partnered SDK providers to properly track the corresponding in-app behavior data. Please note that SKAN data postbacks are only supported for the SDK partners Adjust and Appsflyer.

App Conversions: "Installs" include Click-to-Conversion (CTCV), Engaged View-to-Conversion (EVCV), and View-to-Conversion (VTCV).

Performance Report Overview (2-2) – App Tracking Related Data

The data available for viewing and downloading in the performance report are listed in the table below.

Item Name	Description	Item Name	Description
Search	App Searches – Includes CTCV + EVCV	Level achieved	Level Completions (App) – Includes CTCV + EVCV
Search rate	App Search Rate – Includes CTCV + EVCV	Level achieved rate	Level Completion Rate (App) – Includes CTCV + EVCV
Cost per search	Cost per App Search – Includes CTCV + EVCV	Cost per level achieved	Cost per Level Completion (App) – Includes CTCV + EVCV
Add-to-cart	Add-to-Cart Actions (App) – Includes CTCV + EVCV	Tutorial complete	Tutorial Completions (App) – Includes CTCV + EVCV
Add-to-cart rate	Add-to-Cart Rate (App) – Includes CTCV + EVCV	Tutorial percent complete	Tutorial Completion Rate (App) – Includes CTCV + EVCV
Cost per add-to-cart	Cost per Add-to-Cart (App) – Includes CTCV + EVCV	Cost per tutorial completion	Cost per Tutorial Completion (App) – Includes CTCV + EVCV
Purchase	Purchases (App) – Includes CTCV + EVCV		
Purchase rate	Purchase Rate (App) – Includes CTCV + EVCV		
Cost per purchase	Cost per Purchase (App) – Includes CTCV + EVCV		

- All of the above data require coordination with LAP's partnered SDK providers to properly track the corresponding in-app behavior data.
- Please note that SKAN data postbacks are only supported for the SDK partners Adjust and Appsflyer.

Ad Creative Specs

Ad Creative – Images

1200*628px	1080*1080px	Single Image: 600*400px	Animated Image: 600*400px	Carousel Format：1080*1080px
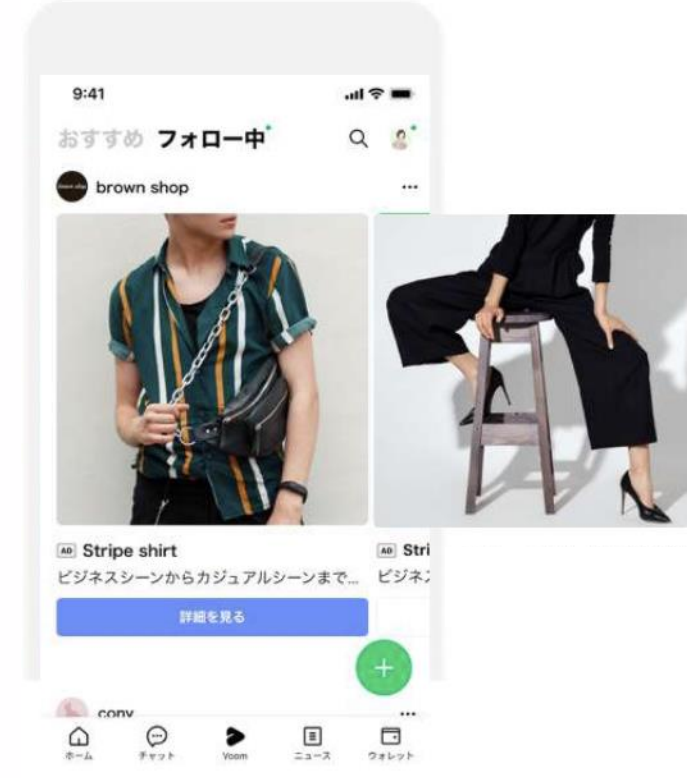

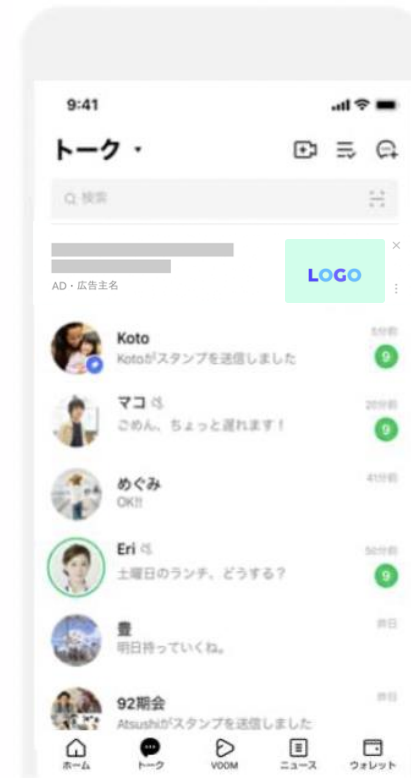

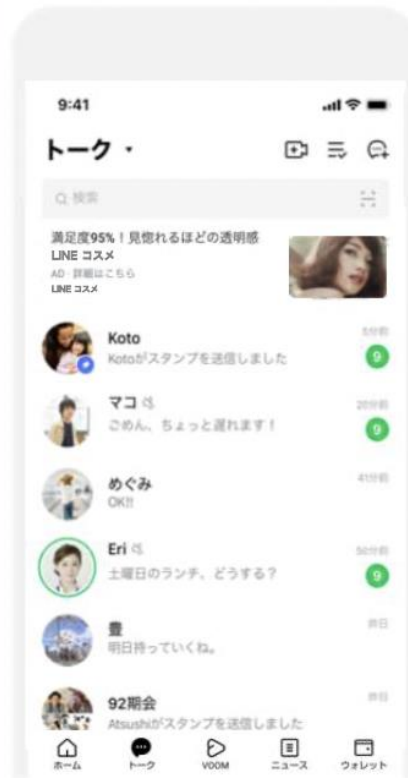

*Ad Sample Image
(clickable during presentation mode)

*Carousel format supports 2–10 images when uploaded via LAP backend.

*When selecting the objective 【Dynamic Product Ads (DPA)】, image creatives must instead be uploaded as "Product Feed (Datafeed)" via FTP. Please refer to the Dynamic Ads Media Guidelines for details. In this case, up to 20 carousel images can be displayed.

*The captured images are for reference only. Actual display may vary depending on the LINE app version, ad placement, and mobile device.

44

Ad Creative – Videos

NEW!

16:9	1:1	Single Video (1:1 & 16:9)	Vertical format 9:16
Display on LINE VOOM
Following Feed（3:4）

Full-screen mode
（9:16）

*Vertical video display ratio is 3:4 (for LINE app version 10.11.0 and above), with partial areas at the top and bottom masked. When users tap on the video, it will expand into full-screen mode with a 9:16 aspect ratio. When using this format, please avoid placing subtitles, logos, or key content too close to the top or bottom edges to ensure full visibility.

*The captured images are for reference only. Actual display may vary depending on the LINE app version, ad placement, and mobile device.

Ad Placement Specifications Table: Standard Ads (excluding Add-Friend Ads and Dynamic Ads)

Ad Placement and Creative Specs Comparison Table: Dynamic Ads (DPA)

	Creative Format	Smart Channel	Social	Home	TODAY	VOOM	Wallet	POINTS	Notes	Album
Image	16:9 Landscape Format	X	V	X	V	X	X	X	X	X
	1:1 Square Format	V	V	V	V	V	V	V	X	X
	Single Image:600*400px	X	V	V	V	V	X	X	V	V
Carousel Format	Any compliant format	X	X	V	V	V	V	V	X	X

*LINE reserves the right to make the latest adjustments; testing plans may be modified at any time.
*Please note that the size specifications for Dynamic Product Ads (DPA) require images to maintain a specific aspect ratio. When displayed in the actual ad, the image may be scaled proportionally to fit the formats mentioned above, which may result in partial blank spaces on the sides.
*To run Dynamic Product Ads (DPA), a separate DPA-dedicated ad account must be created. For details, please refer to the "LINE Dynamic Ads Media Guide."

Creative Submission Specifications

Final Landing Link	Ad Assets	Creative Specifications
Website	1. Image / Video 2. Title 3. Description 4. Button Option 5. Tags (Optional) 6. Landing Page URL 7. Link URL (Optional) 8. Impression Tracking URL (Optional)	■ Image / Video: Select from uploaded media in the "Media" section. ■ Title: Up to 20 characters (full-width or half-width allowed). ■ Description: Up to 75 characters (full-width or half-width allowed). ■ Tags (Optional): Up to 3 tags; total characters within 17; each tag 1–15 characters. ■ Button Option: Select from system dropdown menu, e.g., "Learn More," "Buy Now." ■ Landing Page: URL of the final landing page displayed to users who click the ad. ■ Link URL (Optional): URL with parameters generated by analytics tools; system does not guarantee data consistency. ■ Impression Tracking URL (Optional): Enter the URL provided by third-party tracking tools. Supports Flashtalking and Nielsen Digital Ad Ratings.
Application	1. Image / Video 2. Title 3. Description 4. Button Option 5. Application 6. App Store / Landing Page 7. Link URL (Optional) 8. Impression Tracking URL (Optional)	■ Image / Video: Select from uploaded media in the "Media" section. ■ Title: Up to 20 characters (full-width or half-width allowed). ■ Description: Up to 75 characters (full-width or half-width allowed). ■ Button Option: Select from system dropdown menu, e.g., "Learn More," "Buy Now." ■ Application: Select registered app from the "Media" menu. ■ App Store / Landing Page: Page displayed to users who click the ad. ■ Link URL (Optional): URL with parameters generated by analytics tools; system does not guarantee data consistency. (Avoid special characters; see P35 for details.) ■ Impression Tracking URL (Optional): Enter the URL provided by third-party tracking tools. Supports Flashtalking and Nielsen Digital Ad Ratings.

Currently, LAP only supports CPC or CPM billing units; video creatives are only supported for CPM billing. When selecting "Charge: CPC" in the ad group, only images will be displayed.
To run Dynamic Product Ads (DPA), a separate DPA-dedicated ad account must be created. For creative settings, please refer to the LINE Dynamic Ads Media Guide.

Creative Detailed Specifications

Creative Format	Creative Specifications
Image	■ Size: 1200×628px / 1080×1080px / 600×400px ■ Format: jpg/png ■ File size: up to 10MB ■ Can also use LAP's built-in "Creative Lab Editor" templates for quick image creation

Video / Short Video	■ Codec: H.264, Main/High Profile, square pixels, fixed frame rate, progressive scan
	■ Audio: AAC, recommended 128kbps or higher, mono or stereo
	■ Frame rate: up to 30fps
	■ Format: mp4/mov
	■ Aspect ratio:
	  - 16:9 (width: 240px–1920px, height: 135px–1080px)
	  - 1:1 (width: 600px–1280px, height: 600px–1280px)
	  - 9:16* (width: 135px–1080px, height: 240px–1920px) *Short videos do not support 9:16 ratio
	■ Resolution: up to 1080p (maximum 720p when delivering ads)
	■ Bitrate: up to 8Mbps
	■ Video length: minimum 5 seconds, maximum 600 seconds
	■ File size: up to 1GB

App	■ Platform: select iOS or Android ■ App name: enter the official name of the app ■ Store URL: iOS – App Store URL, Android – Google Play URL

To run Dynamic Product Ads (DPA), a separate DPA-dedicated ad account is required. Please refer to the "LINE Dynamic Ads Media Guide" for asset settings.
When selecting "App Install" or "App Engagement" as the campaign objective, ad delivery may not function properly if the ad's destination URL contains special characters.
(App Store / landing page URLs are not affected and can include special characters.)
LAP defines special characters to include, but not limited to: Traditional/Simplified Chinese, Japanese Hiragana, Korean characters, and emojis.

Creative Detailed Specifications

Creative Format	Creative Specifications
Animated Image	■ Size: 600×400px ■ Format: APNG ■ File extension: .png ■ Animation length: 1–4 seconds ■ Number of frames: 5–20 frames ■ Loop count: 1–4 times ■ File size: up to 300KB ■ Except for size, other specifications follow the "Animated Sticker" production guidelines. For details, refer to: https://creator.line.me/zh-hant/guideline/animationsticker/

LAP Target Audience Overview

LAP allows advertisers to target audiences at different stages of the consumer decision journey.

Broad → **Precise**

	Demographics	Interests / Thoughts / Browsing	Intent / Actions	Actions / Purchase
System Audience / Data from LINE	Age / Gender / Region / OS	Interests	Games / Electronics & Home Appliances / Sports / Career & Business / Fashion / Home & Gardening / TV & Movies / Music / Education & Certification / Finance / Health & Fitness / Automobiles / Books & Comics / Food & Dining / Beauty & Cosmetics / Travel / Entertainment / Shopping
